

## Factory Inspection Program Instructions

- For instruments where:
1. The original warranty has expired, or
  2. The recertification warranty has expired, or
  3. An inspection is requested independent of Intoximeters' recertification program

Factory Inspections are done by appointment only. **The standard turnaround time for a Factory Inspection is one business day (from the confirmed inspection date) plus transit time. If your instrument does not arrive on or before its confirmed inspection date, turnaround times may vary.**

To schedule an appointment, fax the completed Inspection Form on the following page to 314-429-4170.

A confirmation of your confirmed inspection date will be sent to you via fax or email, along with shipping instructions. Do not ship dry gas cylinders with your instrument per federal law. Please be sure to ship the instrument so that it arrives at our facility the business day before your confirmed appointment date.

### Factory Inspection Procedure

- Once we receive your evidential breath testing instrument (EBT), it will proceed through the initial check-out stage.
- If the EBT is in operating order it will continue through testing and leave Intoximeters on the next business day.\*
- If the EBT needs repairs outside the scope of the Inspection, and we have pre-authorization, we will make all necessary repairs.\*

- If we do not have pre-authorization for repairs, the process will stop and an estimate will be prepared for your authorization (\$40 estimate fee applies).\*
- When the Inspection process is completed successfully, we will place an adhesive label on the EBT which will include the month and year of the successful Inspection.
- The EBT will then be returned to the shipping address provided and an invoice or prepaid receipt will be mailed to the bill address provided.

**\*Note:** Turnaround times on instruments requiring additional repairs or authorization from the customer may take longer.

Intoximeters shall not be responsible for any custom software, custom configuration information, or memory data of customer information contained in, stored on, or integrated with any products returned to Intoximeters pursuant to any warranty, repair or Inspection.

**Prior to the instrument's return for inspection, all stored data, settings and custom software required by the customer, should be saved or secured by the customer.**

### Factory Inspection Prices
